

## Current Information from DOLL

Preceding the BAUMA 2007 in Munich, we would like to inform you of the latest developments of DOLL.

Our highlight at the last IAA 2006 surely was the new 5-axle low-bed semitrailer, built for a **major order from the BIGMOVE Group**.

In the meantime, we have delivered 10 units of this vehicle type.

These are the technical details:

- + Unladen weight of less than 17,000 kg despite double telescopic design
- + Inserting an additional tube makes the vehicle a triple telescopic trailer.
- + Ideal vehicle for transporting long and heavy goods.
- + Dropped axles provide a loading area height of 880 mm  
(despite double telescopic version)
- + High economic efficiency and flexibility

**NEW MODEL platform semitrailer P3H-Flatneck**

Because of the high demand for telescopic semitrailers for 2-axle semitrailer tractors, we closed the gap between the conventional 3-axle platform semitrailers (P3H) and the so-called megatrailers.

The new model is called P3H-Flatneck. It boasts the following features for the transport of long and high goods:

- + 135 mm frame-head height (previously 210 mm)
- + Loaded loading area height 1,275 mm, instead of 1,350 mm previously
- + Base length 13,460 mm; extended length 21,460 mm
- + Tyres 385/55 R 22,5

**Please visit us end of April 2007 at the BAUMA in Munich, open air section 7, stand N 715/6, and convince yourself of our competence in vehicle manufacturing.**
